### **Closed Sales**

The number of sales transactions which closed during the quarter

**Economists' note**: Closed Sales are one of the simplest—yet most important—indicators for the residential real estate market. When comparing Closed Sales across markets of different sizes, we recommend comparing the percent changes in sales rather than the number of sales. Closed Sales (and many other market metrics) are affected by seasonal cycles, so actual trends are more accurately represented by year-over-year changes (i.e. comparing a quarter's sales to the amount of sales in the same quarter in the previous year), rather than changes from one quarter to the next.

### Cash Sales

The number of Closed Sales during the quarter in which buyers exclusively paid in cash

**Economists' note**: Cash Sales can be a useful indicator of the extent to which investors are participating in the market. Why? Investors are far more likely to have the funds to purchase a home available up front, whereas the typical homebuyer requires a mortgage or some other form of financing. There are, of course, many possible exceptions, so this statistic should be interpreted with care.

### Cash Sales as a Percentage of Closed Sales

The percentage of Closed Sales during the quarter which were Cash Sales

**Economists' note**: This statistic is simply another way of viewing Cash Sales. The remaining percentages of Closed Sales (i.e. those not paid fully in cash) each quarter involved some sort of financing, such as mortgages, owner/seller financing, assumed loans, etc.

Quarter	Percent of Closed Sales Paid in Cash	Percent Change Year-over-Year

### Median Sale Price

The median sale price reported for the quarter (i.e. 50% of sales were above and 50% of sales were below)

**Economists' note**: Median Sale Price is our preferred summary statistic for price activity because, unlike Average Sale Price, Median Sale Price is not sensitive to high sale prices for small numbers of homes that may not be characteristic of the market area. Keep in mind that median price trends over time are not always solely caused by changes in the general value of local real estate. Median sale price only reflects the values of the homes that *sold* each quarter, and the mix of the types of homes that sell can change over time.

### Average Sale Price

The average sale price reported for the quarter (i.e. total sales in dollars divided by the number of sales)

*Economists' note*: Usually, we prefer Median Sale Price over Average Sale Price as a summary statistic for home prices. However, Average Sale Price does have its uses—particularly when it is analyzed alongside the Median Sale Price. For one, the relative difference between the two statistics can provide some insight into the market for higher-end homes in an area.

Quarter	Average Sale Price	Year-over-Year
Year-to-Date	\$704,833	25.9%
Q1 2023	\$704,833	25.9%
Q4 2022	\$478,166	-16.7%

Q1 2020	\$427,791	18.3%

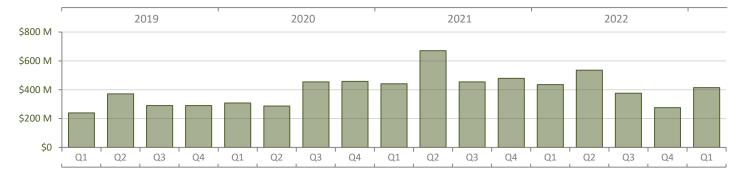

#### Dollar Volume

The sum of the sale prices for all sales which closed during the quarter

*Economists' note*: Dollar Volume is simply the sum of all sale prices in a given time period, and can quickly be calculated by multiplying Closed Sales by Average Sale Price. It is a strong indicator of the health of the real estate industry in a market, and is of particular interest to real estate professionals, investors, analysts, and government agencies. Potential home sellers and home buyers, on the other hand, will likely be better served by paying attention to trends in the two components of Dollar Volume (i.e. sales and prices) individually.

Quarter	Dollar Volume	Percent Change Year-over-Year
Year-to-Date	\$414.4 Million	-4.7%
Q1 2023	\$414.4 Million	-4.7%
Q4 2022	\$275.4 Million	-42.4%

Q3 2020	\$454.4 Million	56.5%
Q2 2020	\$286.7 Million	-22.8%
Q1 2020	\$308.4 Million	29.0%

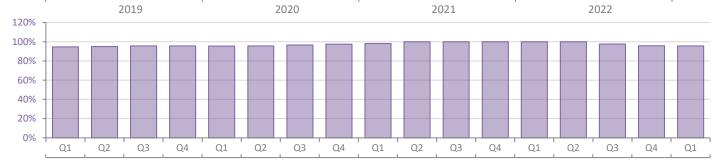

### Median Percent of Original List Price Received

The median of the sale price (as a percentage of the original list price) across all properties selling during the quarter

**Economists' note**: The Median Percent of Original List Price Received is useful as an indicator of market recovery, since it typically rises as buyers realize that the market may be moving away from them and they need to match the selling price (or better it) in order to get a contract on the house. This is usually the last measure to indicate a market has shifted from down to up, so it is what we would call a *lagging* indicator.

Quarter	Med. Pct. of Orig. List Price Received	Year-over-Year
Year-to-Date	95.7%	-4.3%
Q1 2023	95.7%	-4.3%

Q3 2020	96.7%	1.2%
Q2 2020	95.6%	0.6%
Q1 2020	95.5%	0.8%

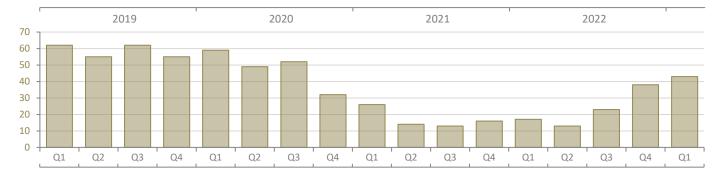

### Median Time to Contract

The median number of days between the listing date and contract date for all Closed Sales during the quarter

*Economists' note*: Like Time to Sale, Time to Contract is a measure of the length of the home selling process calculated for sales which closed during the quarter. The difference is that Time to Contract measures the number of days between the initial listing of a property and the signing of the contract which eventually led to the closing of the sale. When the gap between Median Time to Contract and Median Time to Sale grows, it is usually a sign of longer closing times and/or declining numbers of cash sales.

Quarter	Median Time to Contract	Percent Change Year-over-Year
Year-to-Date	43 Days	152.9%
Q1 2023	43 Days	152.9%
Q4 2022	38 Days	137.5%
Q3 2022	23 Days	76.9%

Q3 2021	13 Days	-75.0%
Q2 2021	14 Days	-71.4%
Q1 2021	26 Days	-55.9%
Q4 2020	32 Days	-41.8%
Q3 2020	52 Days	-16.1%
Q2 2020	49 Days	-10.9%
Q1 2020	59 Days	-4.8%

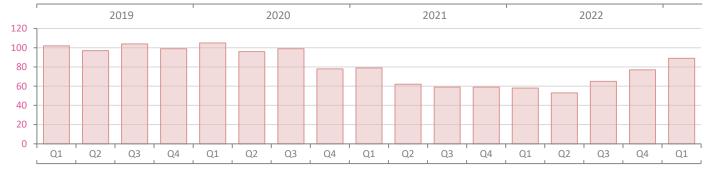

#### Median Time to Sale

The median number of days between the listing date and closing date for all Closed Sales during the quarter

**Economists' note**: Time to Sale is a measure of the length of the home selling process, calculated as the number of days between the initial listing of a property and the closing of the sale. *Median* Time to Sale is the amount of time the "middle" property selling this month was on the market. That is, 50% of homes selling this month took *less* time to sell, and 50% of homes took *more* time to sell. Median Time to Sale gives a more accurate picture than Average Time to Sale, which can be skewed upward by small numbers of properties taking an abnormally long time to sell.

Quarter	Median Time to Sale	Year-over-Year
Year-to-Date	89 Days	53.4%
Q1 2023	89 Days	53.4%
Q4 2022	77 Days	30.5%
Q3 2022	65 Days	10.2%
Q2 2022	53 Days	-14.5%
Q1 2022	58 Days	-26.6%
Q4 2021	59 Days	-24.4%
Q3 2021	59 Days	-40.4%
Q2 2021	62 Days	-35.4%
Q1 2021	79 Days	-24.8%
Q4 2020	78 Days	-21.2%
Q3 2020	99 Days	-4.8%
Q2 2020	96 Days	-1.0%
Q1 2020	105 Days	2.9%

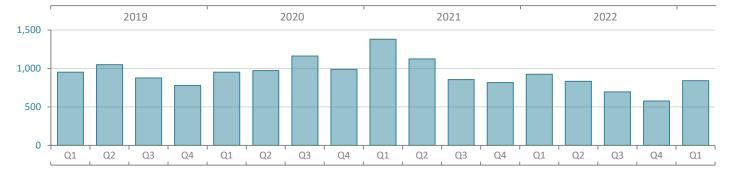

# **New Pending Sales**

The number of listed properties that went under contract during the quarter

**Economists' note**: Because of the typical length of time it takes for a sale to close, economists consider Pending Sales to be a decent indicator of potential future Closed Sales. It is important to bear in mind, however, that not all Pending Sales will be closed successfully. So, the effectiveness of Pending Sales as a future indicator of Closed Sales is susceptible to changes in market conditions such as the availability of financing for homebuyers and the inventory of distressed properties for sale.

## **New Listings**

The number of properties put onto the market during the quarter

**Economists' note**: New Listings tend to rise in delayed response to increasing prices, so they are often seen as a lagging indicator of market health. As prices rise, potential sellers raise their estimations of value—and in the most recent cycle, rising prices have freed up many potential sellers who were previously underwater on their mortgages. Note that in our calculations, we take care to not include properties that were recently taken off the market and quickly relisted, since these are not really *new* listings.

Quarter	New Listings	Percent Change Year-over-Year
Year-to-Date	963	0.9%

### **Inventory (Active Listings)**

The number of property listings active at the end of the quarter

*Economists' note*: There are a number of ways to define and calculate Inventory. Our method is to simply count the number of active listings on the last day of the quarter, and hold this number to compare with the same quarter the following year. Inventory rises when New Listings are outpacing the number of listings that go off-market (regardless of whether they actually sell). Likewise, it falls when New Listings aren't keeping up with the rate at which homes are going off-market.

Quarter	Inventory	Percent Change Year-over-Year	
YTD (Monthly Avg)	834	140.7%	
Q1 2023	841	150.3%	
Q4 2022	822	148.3%

# Months Supply of Inventory

An estimate of the number of months it will take to deplete the current Inventory given recent sales rates

*Economists' note*: MSI is a useful indicator of market conditions. The benchmark for a balanced market (favoring neither buyer nor seller) is 5.5 months of inventory. Anything higher is traditionally a buyers' market, and anything lower is a sellers' market. There is no single accepted way of calculating MSI. A common method is to divide current Inventory by the most recent month's Closed Sales count, but this count is a usually poor predictor of future Closed Sales due to seasonal cycles. To eliminate seasonal effects, we use the 12-month average of monthly Closed Sales instead.

Quarter	Months Supply	Percent Change Year-over-Year	
YTD (Monthly Avg)	3.5	218.2%	
Q1 2023	3.6	227.3%	
Q4 2022	3.3	230.0%

Q3 2020	3.1	-34.0%	
Q2 2020	4.4	-17.0%	
Q1 2020	5.1	-19.0%	

# Closed Sales by Sale Price

The number of sales transactions which closed during the quarter

**Economists' note:** Closed Sales are one of the simplest—yet most important—indicators for the residential real estate market. When comparing Closed Sales across markets of different sizes, we recommend comparing the percent changes in sales rather than the number of sales. Closed Sales (and many other market metrics) are affected by seasonal cycles, so actual trends are more accurately represented by year-over-year changes (i.e. comparing a quarter's sales to the amount of sales in the same quarter in the previous year), rather than changes from one quarter to the next.

Sale Price	Closed Sales	Percent Change Year-over-Year
Less than \$50,000	0	N/A
\$50,000 - \$99,999	1	N/A
\$100,000 - \$149,999	5	-54.5%
\$150,000 - \$199,999	15	-42.3%
\$200,000 - \$249,999	37	-59.8%
\$250,000 - \$299,999	73	-31.1%
\$300,000 - \$399,999	187	-15.4%
\$400,000 - \$599,999	132	-15.4%
\$600,000 - \$999,999	71	-26.8%
\$1,000,000 or more	67	-1.5%

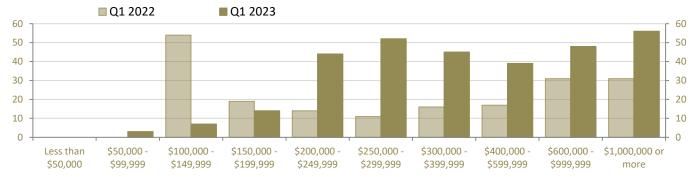

### Median Time to Contract by Sale Price

The median number of days between the listing date and contract date for all Closed Sales during the quarter

*Economists' note*: Like Time to Sale, Time to Contract is a measure of the length of the home selling process calculated for sales which closed during the quarter. The difference is that Time to Contract measures the number of days between the initial listing of a property and the signing of the contract which eventually led to the closing of the sale. When the gap between Median Time to Contract and Median Time to Sale grows, it is usually a sign of longer closing times and/or declining numbers of cash sales.

Sale Price	Median Time to Contract	Percent Change Year-over-Year	
Less than \$50,000	(No Sales)	N/A	
\$50,000 - \$99,999	3 Days	N/A	
\$100,000 - \$149,999	7 Days	-87.0%	
\$150,000 - \$199,999	14 Days	-26.3%	
\$200,000 - \$249,999	44 Days	214.3%	
\$250,000 - \$299,999	52 Days	372.7%	
\$300,000 - \$399,999	45 Days	181.3%	
\$400,000 - \$599,999	39 Days	129.4%	
\$600,000 - \$999,999	48 Days	54.8%	
\$1,000,000 or more	56 Days	80.6%
